

Head Lice***Revised for 2017**

All participants will be checked for head lice upon arrival. All participants must be nit/egg- and lice-free. If head lice and/or nits/eggs are detected, the participant must leave camp until 2 treatments have been given (7 to 10 days apart). Arrangements for possible return to camp will be at the Health Care Coordinator's discretion. In order to avoid the disappointment of missing camp, please check your camper's head regularly in the 2 weeks prior to camp in order to give time for proper treatment. If a second treatment is given immediately prior to camp, please inform the camp Registrar.
